McDonald's Burger Line

Akshay John

Core Decisions & SLA Model

This design addresses the need for managers to reconstruct a late/ wrong order end-to-end and quickly identify the root cause.

Design & Thoughts

→ **SLA Model - Stage-Based SLA (SLA vs. Actual).** The total order breach (RED Banner) provides the instant pop, while color-coded stage bars (Green/Orange/ Red) provide granular insight into where the time slippage occurred.

→ **Timeline Layout -** Gantt-like Swimlanes (Hybrid) -This provides the best visual clarity for duration, sequence, and stage ownership. Each horizontal swimlane is a distinct station/owner, separating responsibilities clearly.

→ **User & Environment -** Desktop/Touch POS (Design prioritizes horizontal space and large, clickable zones)

Edge Cases

Rework x1

Edge Cases Covered

Offline Data Sync: A visual cue is applied to a stage bar (e.g., 'Order Placed') to denote a timestamp that was recorded offline and later synced, showing an intentional state.

Branching/Rework: Stages like 'Assembly' can display Rework x1 on the bar, and show a looping timeline segment, addressing the assumption that orders can loop.

Rework x1

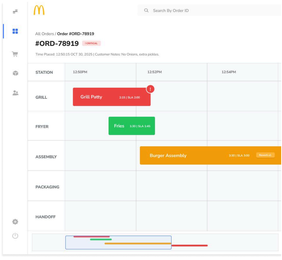
Reasoned Trade-Offs

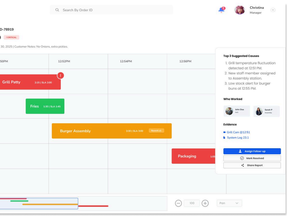
Gantt/Swimlanes with Markers - Visual Model

The timeline section is horizontally dense.

Reasons:

→ The use of clear color-coding and marker icons ensures the manager can spot the problem instantly before reading any text. The Hover State serves as the necessary bridge before the deep dive.





Interaction Model

Requires a wider desktop screen to display both the timeline and the detail panel simultaneously.

Reasons:

→ This trade-off is necessary to avoid requiring multiple screen clicks to view the evidence, adhering to the manager's need to see information "fast"

About Me

Akshay John
Lead Executive

Description

Product Designer with **7+ years** of experience creating digital experiences, brand identities, and motion visuals that connect users to products with emotion and clarity. Skilled across UX/UI, visual communication, and motion storytelling, I merge creativity with usability to craft high-impact designs for enterprise and consumer platforms. Proficient in **Figma, Adobe Creative Suite,** and **prototyping tools**, with hands-on experience in user research, interface design, and creative direction. Passionate about blending aesthetic precision with user empathy to build design systems that scale.
